

OASIS™

Lake and Pond Colorant

NET CONTENTS: 4 Litres

ACTIVE INGREDIENTS: Dye, coupling agents & inert Ingredients.....100%

GENERAL INFORMATION

OASIS is a flexible, concentrated non-toxic water colorant. It creates a beautiful natural appearance for lakes and ponds. This product is an excellent complement to the already existing beauty of golf courses and park fountains.

CAUTION: KEEP OUT OF REACH OF CHILDREN

Avoid contact with skin, eyes and clothing. Do not take internally.

STATEMENT OF PRACTICAL TREATMENT

Do not use in water that is expected to be consumed by humans. OASIS is safe for swimming after complete dispersal. Use OASIS only in water bodies that have restricted flow.

STORAGE AND DISPOSAL

Do not reuse empty container. Triple rinse and offer for recycling or disposal in accordance with local, provincial and federal regulations. Store above 0 °C to prevent freezing.

APPLICATION RATES

Apply 1 L of OASIS per 1250 m³ (1,248,700 L). A 4 L container will treat 5000 m³. Water volume can be determined using the following formula: pond length x pond width x average depth.

After calculating the water volume, pour the appropriate quantity of OASIS along the edge of the lake or pond. OASIS will diffuse evenly, dispersing with currents and normal water movement. To ensure diffusion throughout the entire lake or pond, pour small amounts of OASIS at different points along the edge of the lake or pond or through an aerator, circulation or injection system,

waterfall or fountain. Wear eye protection and rubber gloves, and carefully apply OASIS directly to the water. OASIS is safe to fish and aquatic species, waterfowl, wildlife and pets. It is a non-corrosive dye and when used according to recommended rates, will not stain stone, fountains, approved aquatic features or swimwear. OASIS will stain rocks, decking and other porous surfaces if spilled or applied as a concentrate.

OASIS is a high quality aquatic dye that will be oxidized and degraded by chlorine, which will diminish dye concentration and lake or pond coloration. In non-chlorinated systems or lakes and ponds, OASIS is broken down gradually through biological and photo degradation. Coloration is also reduced through the natural process of dilution (i.e. addition of fresh water to the lake or pond). The original colour level should be effective for 2-4 weeks, depending on the lake or pond system. Chlorinated systems typically require additional OASIS within 2 weeks while biological and photo degradation is common within 4 weeks. To return the beauty of the lake or pond colour to its intended coloration level, simply add small amounts of OASIS from time to time. This will offset the chlorination or natural bleaching that occurs in every dyed lake or pond environment.

WARRANTY

Seller warrants that this product conforms to its chemical description and is reasonably fit for the purpose stated on the label when used in accordance with directions under normal conditions of use, but neither this warranty nor any other warranty of merchantability of fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to the seller, and the buyer assumes the risk or any such use.
