

Managing drift in your spray operation

Managing your spray operation is important.
Precision agriculture means less room for mistakes.

Margin for error can be managed by following
these simple steps to good spray management.

- √ Always use good judgment
- √ Use proper well calibrated equipment
- √ Select proper nozzles and pressure
- √ Spray under low wind conditions
- √ Use ON TARGET drift management agent in conjunction with other good spraying practices

Successful spray professionals make these steps a part of each and every application

ON-TARGET

- √ New generation chemistry
- √ Now used at lower rates – low cost per acre
- √ Disperses easier than conventional products
- √ Will not plug equipment and is easier to clean
- √ Compatible with glyphosate.
- √ Helps keep spray on target – *in the field and on the target weeds!*
- √ Superior deposition aid – Maximizes spray efficiencies
- √ Reduces fine spray droplets and produces a uniform spray pattern
- √ Reduces potential for environmental concern

Keep it On Target!
