

PRO-SURF II

Non-Ionic Surfactant

Enhanced performance of post-emergence herbicides using surfactants has been well documented. Surfactants are usually mixtures of more than one product. It is important to understand how PRO-SURF II works and how it can benefit farmers in controlling weeds.

How much do I need?

The rate is tested for optimum performance. Adding a lower rate of PRO-SURF II will not allow the spray droplet to flatten or spread and break down the leaf's waxy cuticle. A higher than label rate may cause the spray droplets to run off the leaf.

<i>PRO-SURF II</i>						
AMOUNT TO ADD PER TANKFUL						
Rate of PRO-SURF II	Spray tank capacity in litres (gal. imp.) [gal. US]					
	500 L (110) [132]	1000 L (220) [264]	1500 L (330) [396]	2000 L (440) [528]	2500 L (550) [660]	3000 L (660) [793]
2.0 L/1000 L	1.0 L	2.0 L	3.0 L	4.0 L	5.0 L	6.0 L
2.5 L/1000 L	1.25 L	2.5 L	3.75 L	5.0 L	6.25 L	7.5 L

Consult each product label for precautions and use directions.
