

TRAMLINE FOAM MARKING AGENT

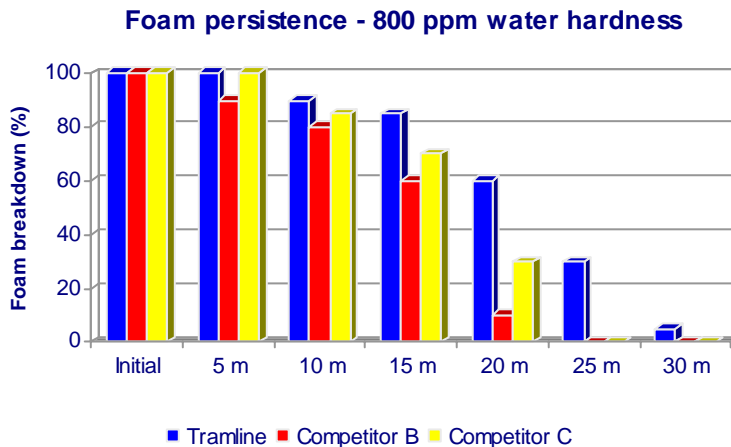

Savings through increased accuracy

With today's high chemical costs, an effective marking system is essential for accurate and economical spraying. Increased accuracy prevents costly skips and overlaps. Using less chemical provides valuable savings.

So precision counts – a spray overlap of just one foot using a 50' boom and a \$25.00/acre product will result in an over application equal to \$1.00/acre.

For pennies an acre you save on spraying costs through accurate applications with ***TRAMLINE*** foam marking agent.

- ✓ ***TRAMLINE*** chemistry is designed for moisture retention and cell structure stability
- ✓ Heat and cold stability tested
- ✓ Builds thick long lasting foam
- ✓ Contains buffers & sequestering agents for a wide range of water hardness
- ✓ Concentrated all weather foaming agent
- ✓ Standard dilution 100:1 – 120:1 (dilution up to 160:1 depends on water hardness)

TRAMLINE – increase your accuracy
