

OASIS™

Lake and Pond Colorant

OASIS is a high quality, concentrated water colorant. It creates a beautiful natural appearance to lakes, ponds. It also complements the already existing beauty of golf courses, parks and fountains. OASIS is safe to fish and aquatic species, waterfowl, wildlife and pets. It is non-corrosive and when used according to recommended rates, will not stain stone, fountains, approved aquatic features or swimwear.

Apply 1 L of OASIS per 1250 m³ (1,248,700 L). A 4 L container will treat 5000 m³. Water volume can be determined using the following formula: pond length x pond width x average depth.

In lakes, ponds and non-chlorinated systems, OASIS is broken down gradually through biological and photo degradation. Coloration is also reduced through the natural process of dilution (i.e. addition of fresh water to the bodies of water).

The original colour level should be effective for 2-4 weeks, depending on environmental factors such as sunlight. Chlorinated systems typically require additional quantities within 2 weeks since chlorine will oxidize and degrade this product. To return the colour to its intended coloration level, simply add small amounts of OASIS from time to time. This will offset the chlorination or natural bleaching that occurs in every coloured bodies of water.

Features & Benefits

- ✓ **Non toxic – safe to fish, aquatic species, waterfowl, wildlife and pets**
- ✓ **Easy to use – does not need to be prediluted and no special equipment required**
- ✓ **Concentrated – disperses readily by currents and natural movement of water**
- ✓ **Cost effective – can last up to 4 weeks or more**
- ✓ **Non corrosive – will not damage equipment or tools**
- ✓ **Give natural appearance to water – enhances the beauty of lakes, ponds and other bodies of water**
